BERMAD Irrigation

400 Series

Flow Control

Flow Control and Pressure Reducing Valve

with Solenoid Control

IR-472-55-bRU

The BERMAD Flow Control and Pressure Reducing Valve with Solenoid Control is a hydraulically operated, diaphragm actuated control valve that performs three independent functions. It controls system demand to a preset maximum flow rate; it reduces downstream pressure to a constant preset maximum, and it either opens or shuts in response to an electric signal from an irrigation computer.

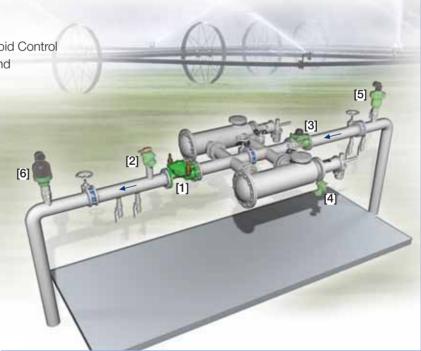

Features and Benefits

- Hydraulic Flow & Pressure Control with Solenoid Control
 - Limits fill-up rate and consumer over-demand
 - Protects downstream systems
 - Electrically controlled On/Off
- Advanced Globe Hydro-Efficient Design
 - Unobstructed flow path
 - Single moving part
 - High flow capacity
- Fully Supported & Balanced Diaphragm
 - Requires low actuation pressure
 - Excellent low-flow regulation performance
 - Prevents diaphragm distortion
- Hydraulic Flow Sensor (upstream installation)
 - No Moving parts
 - No need for flow straightening
- Simple In-Line Inspection and Service

Typical Applications

- Computerized Irrigation Systems
- Remote and/or Elevated Plots
- Line Fill-Up Control
- Multiple Independent Consumer Systems
- Pressure Reducing Stations
- Irrigation Machines
- Distribution Centers
- Filter Stations

- [1] BERMAD Model IR-472-55-bRU opens in response to an electric signal, limits fill-up rate and consumer over-demand, and reduces system pressure.
- [2] BERMAD Relief Valve Model IR-43Q-R
- [3] BERMAD Water Meter Model WPH
- [4] BERMAD Filter Flush Valve Model IR-405-Z
- [5] BERMAD Air Valve Model ARC-A-I-I
- [6] BERMAD Air Valve Model ARC-A-P-I

Pressure Rating: 16 bar; 232 psi

Operating Pressure Range: 0.5-16 bar; 7-232 psi For lower pressure requirements, consult factory

Setting Range: 1-10 bar; 15-145 psi

Flow Setting Range: ±20% from valve predetermined flow

Orifice diameter is calculated in accordance with desired ΔP at predetermined flow: Although the standard calculated ΔP is 0.4 bar; 5.5 psi,

the actual head loss is 0.2 bar; 2.8 psi.

Materials:

Body and Cover:

Polyester Coated Cast or (10"; DN250 and larger) Ductile Iron **Spring:** Stainless Steel

Diaphragm:

Nylon fabric Reinforced NR with rugged insert

Control Accessories: Brass Tubing and Fittings:

Reinforced Plastic and Brass

Solenoid Voltage Range:

S-390 & S-400:

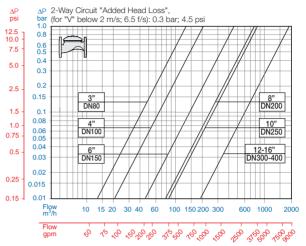

24 VAC, 24 & VDC

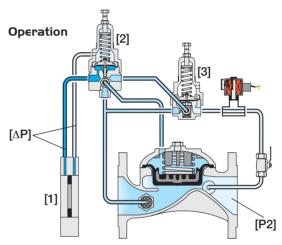

S-392 & S-402: 9-20 VDC, Latch

S-982 & S-985: 12-50 VDC, Latch

Other Voltages available

Flow Chart

Pressure Differential [ΔP] across the Orifice Assembly [1] is in direct proportion to demand. The Flow Pilot [2] continuously senses [ΔP] and commands the Valve to throttle closed should demand rise above pilot setting, and to modulate open when demand drops. The Pressure Reducing Pilot [3] controls the Valve to prevent Downstream Pressure [P2] from rising above pilot setting. The Solenoid [4] closes in response to an electric signal, shutting the main Valve.

How to Order

Please specify the requested valve in the following sequence: (for more options, refer to Ordering Guide.)
